

Dear FCC:

XM Satellite radio is normally the only radio that I can (and do) listen to each day. I don't understand why I should be prohibited from getting local programming via XM -- especially since I pay for it and have come to regard it as my primary source of news and information.

Please reject NAB's petition 04-160 and let me continue to experience the variety and reliability that satellite radio provide me. It would be a big plus to get local traffic/weather/news info via XM!

Regards,
William Lyon
